

The canonical 47 is a versioned snapshot, not a 273-run funnel result

273 counts attempted run slots; the committed 2026-06-25 table contains the first 141 rows = 47 species x 3 labels.

Versioned snapshot coverage by chemical family

91

curated compounds

Post-hoc G1-G5 audit starts here: 47

Later notes say 273/273 completed, but the unified 273-row table is not versioned. Missing from this snapshot does not mean physically rejected.
